
Project One Campus Warwick School

Project Description

The project involves the creation of a new main school building, a new shared music building, a new Sixth Form Centre and improvements and extension to the Bridge Sports Centre. The project will be one of the largest new school building projects of recent times.

New and improved sports pitches – including 4G and all weather surfaces – will also be built at the site.

Nolan Associates have been responsible for designing the 600 Tonnes of steel framed structure, glulam timber roof and reinforced concrete foundations. Nolan Associates are also designing the drainage and external works for the site. New parking is provided on the perimeter of the site which will allow the creation of a series of linked green spaces and courtyards to radically improve the schools environment.

Client	Warwick Independent Schools Foundation
Contractor	Speller Metcalfe
Architect	Nicholas Hare Associates
Value	£29 million
