
Green Frog Power

Hull

Project Description

Power generation facility to top up shortages in peak demand. The provision of 52 large diesel powered generators on a difficult site subject to flooding. The facility has a 4m high reinforced security wall with enhanced gates that incorporate flood defence barriers. The engines and diesel supply tanks were banded and the whole facility had a concrete slab to isolate it from the local environment in case of contamination spillages. It was a high security installation with CCTV monitoring regular patrols and key card only access.
