
Lidl Erdington

Project Description

This project involved the renovation of an existing Lidl Store and the provision of an additional car park. The existing structure was largely retained and modified where required to provide a new bakery and double height checkout area. Temporary stability of the structure during demolition was important in the design of the store extension to safely retain the existing structure where possible. The existing timber truss roof was modified to allow the safe removal of a number of trusses to facilitate the construction of the independent steel frame that forms the new store entrance and checkout area.

Client	Lidl UK GmbH
Contractor	ISG
Architect	Darnton B3
Value	under £1 million
