
Southern Justice Centre, Leamington Spa

Project Description

A five-storey building combining the crown prosecution service, the police, youth offending team, victim support and probation services. The building was constructed using a post tensioned and reinforced concrete frame on piled foundations.

Nolan Associates were lead structural and civil engineers responsible for the design of this four-storey concrete frame with a steel frame forming the fifth roof storey on reinforced concrete cap and cfa piles.

The existing basement car park slab and retaining walls were re-used within the final design. The retaining walls and basement slab incorporated measures to protect the structure against the potential flooding from the River Leam to the south of the site.

Client	Warwickshire HMCS and Police Authority
Contractor	Galliford Try Plc
Architect	Hurd Rolland Partnership
Value	£26 million
